

idrive Online Backup gives your company the opportunity to backup your critical data offsite to a secure data centre located in Sydney. Data should always be secured offsite and available online. In three simple steps, idrive can help small business protect their critical data.

Two Products

idriveOBMTM

idrive Online Backup Manger is a comprehensive client side backup application bundled with various database backup modules for backing up files and databases from client-side computers to our secure offsite backup servers. This product is best suited to server or high end desktops.

idriveACBTM

A light version of idrive Online Backup Manager with all major features retained while having an easy-to-use interface, which is most suitable for backing up desktop and laptop computers, or home use.

Three Easy Steps

1. Prodigy installs software on your system

Prodigy can either log in remotely or step you through installing the software on your system.

Backup your Windows PC, Mac or Linux.

Server backup for both Windows and MAC, backup for MS Exchange*, MS SQL, MySQL, Solaris and Lotus.

* \$20 one-off for Exchange module

2. Select files for offsite backup

Simply tick which files and folders you wish to backup online. Use our simple wizard to select 'My Documents', 'Outlook' or other commonly used files. Or choose exactly the files and folders that need to be stored offsite and online. Filters can help automatically send only the files necessary for backup.

3. Upload to secure online server

All your data is encrypted and compressed before it leaves your computer. The encryption key remains on your computer to give you complete security. Your data is then uploaded to our offsite backup servers located in a Class 1 Data Centre in Sydney. Choose from multiple backup sets and multiple schedules or option of 'Continuous Data Protection' and also backup locally and offsite. A full report of all backups, missed backups and errors are emailed directly to you.
